WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No. PCT/GB2005/000476

_	Box					
1.	With regard to the language, this opinion has been established on the basis of the international application in the language in which it was filed, unless otherwise indicated under this item.					
		lan (un	s opinion has been established on the basis of a translation from the original language into the following guage , which is the language of a translation furnished for the purposes of international search der Rules 12.3 and 23.1(b)).			
2.	 With regard to any nucleotide and/or amino acid sequence disclosed in the international application and necessary to the claimed invention, this opinion has been established on the basis of: 					
	a. ty	pe	of material:			
]	a sequence listing			
	C]	table(s) related to the sequence listing			
	b. fo	orm	at of material:			
	0		in written format			
	נ		in computer readable form			
	c. ti	me	of filing/furnishing:			
	ſ		contained in the international application as filed.			
	Į		filed together with the international application in computer readable form.			
	1		furnished subsequently to this Authority for the purposes of search.			
3	3. 🗆	h:	addition, in the case that more than one version or copy of a sequence listing and/or table relating thereto as been filed or furnished, the required statements that the information in the subsequent or additional opies is identical to that in the application as filed or does not go beyond the application as filed, as opropriate, were furnished.

Re Item IV.

The separate inventions/groups of inventions are:

Claims 1-25,28-33,36-44,46-51

An insert containing ingredients for use in a beverage preparation machine.

Claims 26,27,34,35,45

An insert comprising coding means for controlling a beverage preparation machine.

They are not so linked as to form a single general inventive concept (Rule 13.1 PCT) for the following reasons:

The problem underlying the invention stated in the independent claim 1 is not novel and the same solution to it has already been found, see document US-5762987-A (D1), which discloses in combination, at least implicitly, all the features as defined in the present independent claim.

Therefore, the original single inventive concept also covering the subject matter of the claims 26, 27, 34, 35 and 45 is not acceptable anymore, making it necessary to re-establish the technical relationship or interaction of the technical features stipulated in said dependent claims 26, 27, 34, 35 and 45. This leads to a regrouping under different subjects as listed above, each subject now having its own distinct inventive concept, having a technical distinct and independent feature.

The special technical features, as defined in Rule 30 EPC, of the first group of claims, i.e. the shape, material and operative coupling of the insert to the brewing head, apparently solve the problem of providing an alternative to disposable cartridges.

The special technical features of the second group of claims, i.e. the machine readable code on the insert, and the necessary modifications to the brewing head apparently solve the problem of automatically controlling the operation of the coffee machine.

No same or similar special technical features can be determined and different underlying

problems are solved. Moreover, it is clear that the claimed inventions can be applied independently of each other, i.e. they are not necessarily inter-related.

It appears therefore that no technical relationship between the various claimed inventions exists involving one or more of the same or corresponding special technical features. The two groups of claims are thus not so linked as to form a single general inventive concept.

Re Item V.

1. DOCUMENTS CITED

Reference is made to the following document:

D1: US 5 762 987 A (PLEISCH JEAN-PIERRE ET AL) 9 June 1998 (1998-06-09)

2. INDEPENDENT CLAIM 1

2.1 The present application does not meet the criteria of Article 33(1) PCT, because the subject-matter of device claim 1 is not new in the sense of Article 33(2) PCT. Document **D1** discloses (fig.10):

An insert (sachet 58) for use in a beverage preparation machine of a type comprising a brew head suitable for receiving a rigid or semi-rigid cartridge (may be compacted into a cake, col.1 lines 56-58), the brew head comprising an upwardly directed inlet (64) for supplying water to the brew head and a downwardly directed outlet (66) for outflow of beverage produced by the machine, the insert comprising an upper part (upper half of sachet 58), a lower part (lower half of sachet 58) and sealing means (flange of sachet 58), the upper and lower parts being moveable between an open configuration in which a quantity of beverage ingredients may be loaded into the insert (before sealing, during manufacture) and a closed configuration (as shown) in which the upper and the lower parts are sealed together by the sealing means to define therebetween a brewing volume containing, in use, the quantity of beverage ingredients, the lower part comprising (when pierced) an inlet and an outlet arranged to communicate respectively with the inlet and outlet of the brew head of the beverage preparation machine when the insert is inserted

into the machine such that, in use, water from the inlet of the brew head passes upwardly through the inlet of the insert into the brewing volume and such that beverage produced from the water and the quantity of beverage ingredients passes downwardly through the outlet of the insert to flow out of the outlet of the brew head (col.9 lines 53-57; col.12 lines 18-21).

- 2.2 The above arguments apply, mutatis mutandis, to independent claim 36, whose subject-matter is therefore also not new.
- 2.3 The present application also does not meet the criteria of Article 33(1) PCT, because the subject-matter of method claim 51 is not new in the sense of Article 33(2) PCT. Document **D1** discloses (fig.10):

A method of dispensing a beverage using a beverage preparation machine comprising a brew head suitable for receiving a rigid or semi-rigid cartridge (may be compacted into a cake, col.1 lines 56-58), the brew head comprising an upwardly directed inlet (64) for supplying water to the brew head and a downwardly directed outlet (66) for outflow of beverage produced by the machine, the method comprising the steps of: opening a closure mechanism (jaw system, fig.11,12) of the beverage preparation machine; inserting an insert (sachet 58) into the brew head, the insert being as claimed in any of claims 1 to 35 and containing a quantity of beverage ingredients (see paragraph 2.1 above); closing the closure mechanism to squeeze the insert with sufficient force such that the sealing means of the insert seals together the upper and lower parts of the insert (col.12 lines 34-38); operating the beverage preparation machine to pass water upwardly from the inlet of the brew head through the inlet of the insert into the brew volume of the insert (fig.10); dispensing a beverage formed in the brew volume from the water and the beverage ingredients downwardly through the outlet of the insert and the outlet of the brew head (fig.10).

International application No.

PCT/GB2005/000476

3. DEPENDENT CLAIMS 2-35, 37-51

Dependent claims 2-35, 37-51 do not contain any features which, in combination with the features of any claim to which they refer, meet the requirements of the PCT in respect of novelty and/or inventive step (Article 33(2) and (3) PCT).

The features of the above claims are either known from D1 or revealed in the prior art quoted in the search report. Their inclusion in the insert according to claim 1 can only be seen as an obvious option for the skilled person.
